Enterprise ERP Framework

AdIER Overview

The winning edge is very critical for any organization in today's business world which has become very competitive. For an effective output, an ERP framework should flawlessly merge information from one department to another and should address the needs of the organization to reduce costs, improve overall customer service, enhance company performance and facilitate growth. AdIER does exactly this and ensures that core functions including financials, human resources, sales, procurement and inventory management and reporting systems are dynamically improved.

AdIER is an integrated enterprise resource planning application framework designed specifically to meet the operational needs of single or multiple companies, small to large sized organizations. With well-covered and extended functionalities, excellent user interfaces and rapid implementation cycle, AdIER provides a comprehensive solution with low total cost of ownership. AdIER is flexible, mature, feature-rich and fully integrated business information system that helps you take control of all your business needs. Available as cloud-hosted and on-premises versions, AdIER can address the business situations of small-sized companies with single-location user to corporates with multi-location users.

AdIER Advantages For Your Organization

AdIER provides a fully integrated business process framework that has all industry standards and best practices built in its functionalities. Our implementation team starts off with a detailed system study and design phase mapped at your site and interacts with the stakeholders. The AdIER framework can be customized for any specific process requirements by our on-site and off-shore development teams. The customization flexibility of AdIER assures that the users can go live with a short training process. AdIER supports multi-company transactions in all modules. The hierarchy can be set as a holding company and divisions under the same. MIS reports can be generated for the group as well as for the individual companies. The MIS reports and dashboards of AdIER stand out as effective control mechanisms for business owners. AdIER mobile app in multiple versions and HR ESS (Employee Self Service) are the latest additional features that are available for the enterprise level users.

AdIER Product Variants

AdIER STANDARD

The standard version is best suitable for medium level of organizations who have multiple business lines which are managed in a centralized or decentralized manner. The features provided in this version ensures that the organization will not require any additional manual processes to manage the business. The array of reports in each module are selected based on the significance of it on the business. Standard version can be implemented in an organization where the TCO (total cost of ownership) for the solution is at a moderate level.

AdIER ENTERPRISE

AdIER enterprise is the premium solution suitable for enterprise level organizations with multiple business houses and subdivisions. Consolidations are possible at different levels based on the organizational structure. More than 1000 standard reports are available across the core modules and any vertical specific modules can be plugged into the solution as and when required. The solution provides high level of scalability, customization flexibility and on top of all, an end-to-end enterprise level solution suitable for the business.

Mobile Apps

AdIER ERP framework comes with Integrated Mobile Apps available on both Android and iOS to enable the customers to reach out their business at any point of time. The various mobile apps ensures that business decisions will not be delayed since alerts, notifications, dashboards, and approvals are available on the Mobile App for quick review and decision-making. The mobile apps are available in multiple variants which the customers can choose based on their requirements.

AdIER Fusion

The AdIER Fusion app is a management app which provides a total control of your business at your fingertips, connecting business operations, sales, and inventory in real-time. It enables teams to access data, approve transactions, and stay productive wherever they are.

AdIER ESS

An app that streamlines employee self-service, giving staff instant access to attendance, leave, and payroll information. It reduces HR dependency and enhances transparency across the workforce.

SaleGO

A B2B delivery application designed to streamline operation of wholesale, distribution and delivery of products through a unified delivery platform. The SaleGO app simplifies order placement, delivery tracking, invoicing and client communication, all from one smart app.

PROFAC

PROFAC simplifies property and tenant request management for owners and property managers handling multiple sites. From service requests to facility bookings and closures, everything can be managed on one mobile app.

SiteWatch

SiteWatch is an integrated mobile attendance and workforce management app for field and site-based teams. It lets you track attendance, monitor workforce activity in real time, and improve site productivity with geo-tagged accuracy.

TECMATE

TECMATE is a technician management app that empowers field teams to handle service calls, updates, and maintenance tasks in real time. It ensures faster turnaround, transparent service tracking, and improved client satisfaction.

ATSYS

A smart asset tracking app that ensures total visibility and accountability of your movable and fixed assets. With RFID and IoT integration, it helps you monitor, maintain, and manage assets efficiently across locations.

AQUAMOB

AQUAMOB is a smart water distribution app that connects supermarkets, distributors, and consumers for smooth drinking water delivery. Whether it's bottles, coolers, or dispensers, AQUAMOB simplifies ordering, tracking, and delivery scheduling.

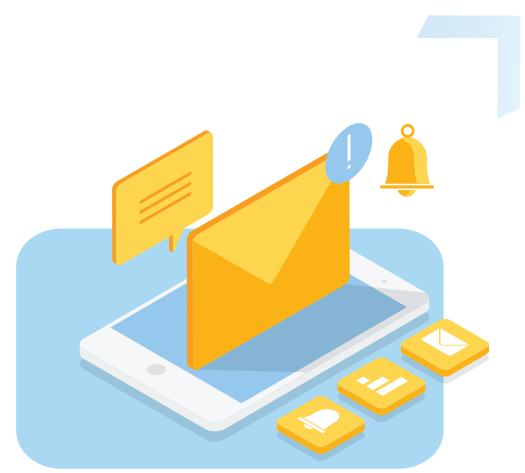

Dashboards

The dashboards are the direct performance indicators of the organization, and it is a vital Business Intelligence (BI) tool that is required for any company. AdIER comes with various dashboards which provide insightful data to the users and decision-makers. AdIER has the option to set dashboards in all the modules and the configuration tools helps the system administrator to set up dashboards to users based on the user levels, hierarchy, company settings, module access, etc. Within the dashboard tool, there are settings options to set the graph type, display type, etc., which the user can set.

Alerts

AdIER has a unique feature of system alerts which keeps the user always aware about the priority tasks to be completed. Every module has got the alert functions which can be set based on the user permission settings. From the alert screen, there are options to drill down and see the details without going into the corresponding reports. For example, in Procurement department alerts, if the systems show 20 purchase orders pending for delivery, the user can drill down and see the details of all the 20 PO's. There are options to establish the configuration parameters like the frequency of all the alerts, time frame, advanced information, minimum value or maximum value settings, etc.

Approval Workflow

AdIER has in-built workflow for approval cycles in almost all of the modules. The system administrator can set the approval workflows based on the hierarchy of the organization and on various parameters. The system has the capability to alert the approver with the notifications for approvals. The requester can see the status of his request at any point of time.

AdIER Add-On Modules

AdIER provides vertical specific add-on modules to manage the operations of the organization. The add-on modules are plugged in along with the core modules to provide an end-to-end ERP framework to the users. AdIER has more than 20 business vertical solutions and a few are listed below.

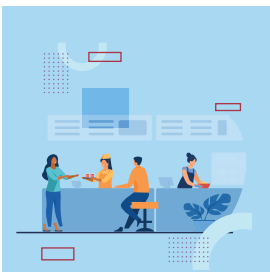

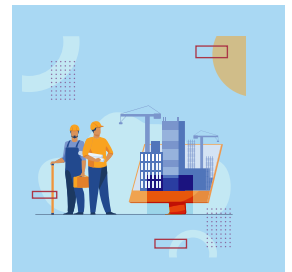

TRADING

It is an end-to-end solution to help businesses of any size to meet the terms with trading strategies, automate transactions and secure supply chain visibility from a single database. The solution manages trade operations around the clock and monitors the industry to capture and analyze appropriate indicators for business growth. The flexibility of the system helps businesses efficiently optimize their sales and increase the ROI of their investments from manufacturers to wholesalers or retailers, and ultimately to consumers.

PROJECT MANAGEMENT

Our comprehensive project management suite offers complete visibility and control over any project or task. It supports enterprise-level scalability and security while allowing businesses to control budget and maintain excellence in work. The Project Management module comes with extensive integration and manages all components, namely, material, manpower, sub-contracting, equipment & other charges, on a single, user-friendly interface to make it easier for organizations to function well.

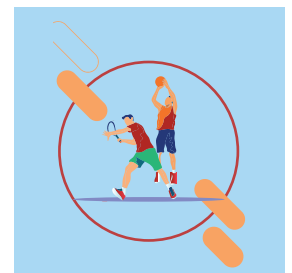

F & B POS

The end-to-end restaurant management module is specially designed to serve the F&B industry. It works for small cafes to multi-chain restaurants. The user-friendly, device-agnostic solution is fully integrated and manages daily restaurant activities, front and back office works, seamlessly. It plays a significant role in increasing your restaurant's overall productivity and revenue by enhancing customer experience and satisfaction.

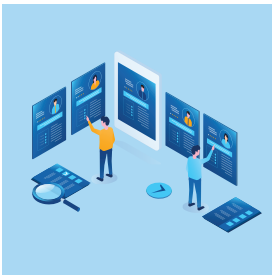

RECREATION MANAGEMENT

The configurable recreation management system enables businesses to manage all aspects of recreational functionalities such as membership management, guest access control, events, program registration and booking. The solution streamlines the management of operations to reduce back office tasks, and increase efficiency and revenue. The solution is suitable for clubs, spas, entertainment centers, among others. This module supports complete customization and integration to fit the design of recreational organizations of any size and shape.

PRODUCTION

The end-to-end Production Management solution helps businesses to plan and control industrial or organizational production processes to ensure that work flows efficiently and meet the expectations. The customizable and transparent system coordinates, supervises, and control persons or groups in production regarding machinery maintenance, inventory control, and quality check, with all the information, like downtime, trouble-spots, and performance improvements, made accessible through a single dashboard.

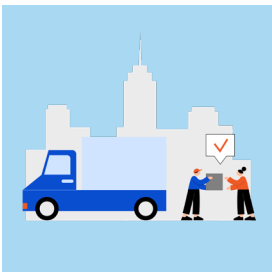

PROPERTY MANAGEMENT

AdLER's Property & Facilities Management solution provides a unified platform to manage leased properties, assets, utilities, and maintenance operations efficiently. It streamlines property allocation, agreements, billing, and maintenance requests while offering real-time visibility, alerts, and financial insights through the PROFAC app for mobility and control.

OUTSOURCING SERVICES

Outsourcing Service Management module empowers organizations to manage third-party operations with complete transparency and control. From proposals and approvals to deployment and performance tracking, it streamlines every stage of outsourcing. With real-time monitoring, automated workflows, and centralized data, it ensures efficiency, accountability, and measurable outcomes across all engagements.

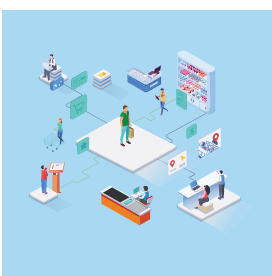

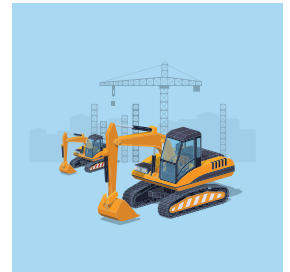

WATER DISTRIBUTION

AdLER Water Distribution Management solution provides an end-to-end platform for managing bottled water, cooler, and dispenser deliveries. With its integrated app called AQUAMOB, the solution enables distributors and suppliers to streamline order management, automate delivery scheduling, and track operations in real time, ensuring faster turnaround, improved accuracy, and complete visibility across the distribution network.

EQUIPMENT RENTAL

A comprehensive module to run and organize a company's entire rental operations. It helps to work between the back office, storefront, the shop, or between multiple branches. The customizable system tracks every piece of equipment and inventory, and supports regular equipment maintenance. The customizable and feature-rich solution offers the tools and reporting capabilities for maximum efficiency in any business.

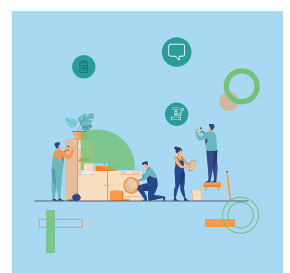

RETAIL & POS

The extensive Retail Management solution supports various aspects of a physical or e-commerce store, providing operational efficiencies and revenue uplift across the whole chain. The solution functions as a tool to streamline operations, improve customer processes and provides control of store operations to meet business objectives, and stay ahead in the competition. It offers complete flexibility and comprehensive reporting too.

FACILITY MANAGEMENT

The all-in-one Facility Management software solution is suitable for companies who are into hard services, soft services or integrated facility management services. It streamlines the facility management in an organization to optimize the efficiency and effectiveness. The system is equipped with detailed reporting capabilities to support strategic decision-making and is tailored for companies of all sizes.
