

Mobile Enterprise Control,
for work on the move.

Anvin Infosystems, Your Partner in Business Technology.

Operational Control Of Your Business, At Your Fingertips.

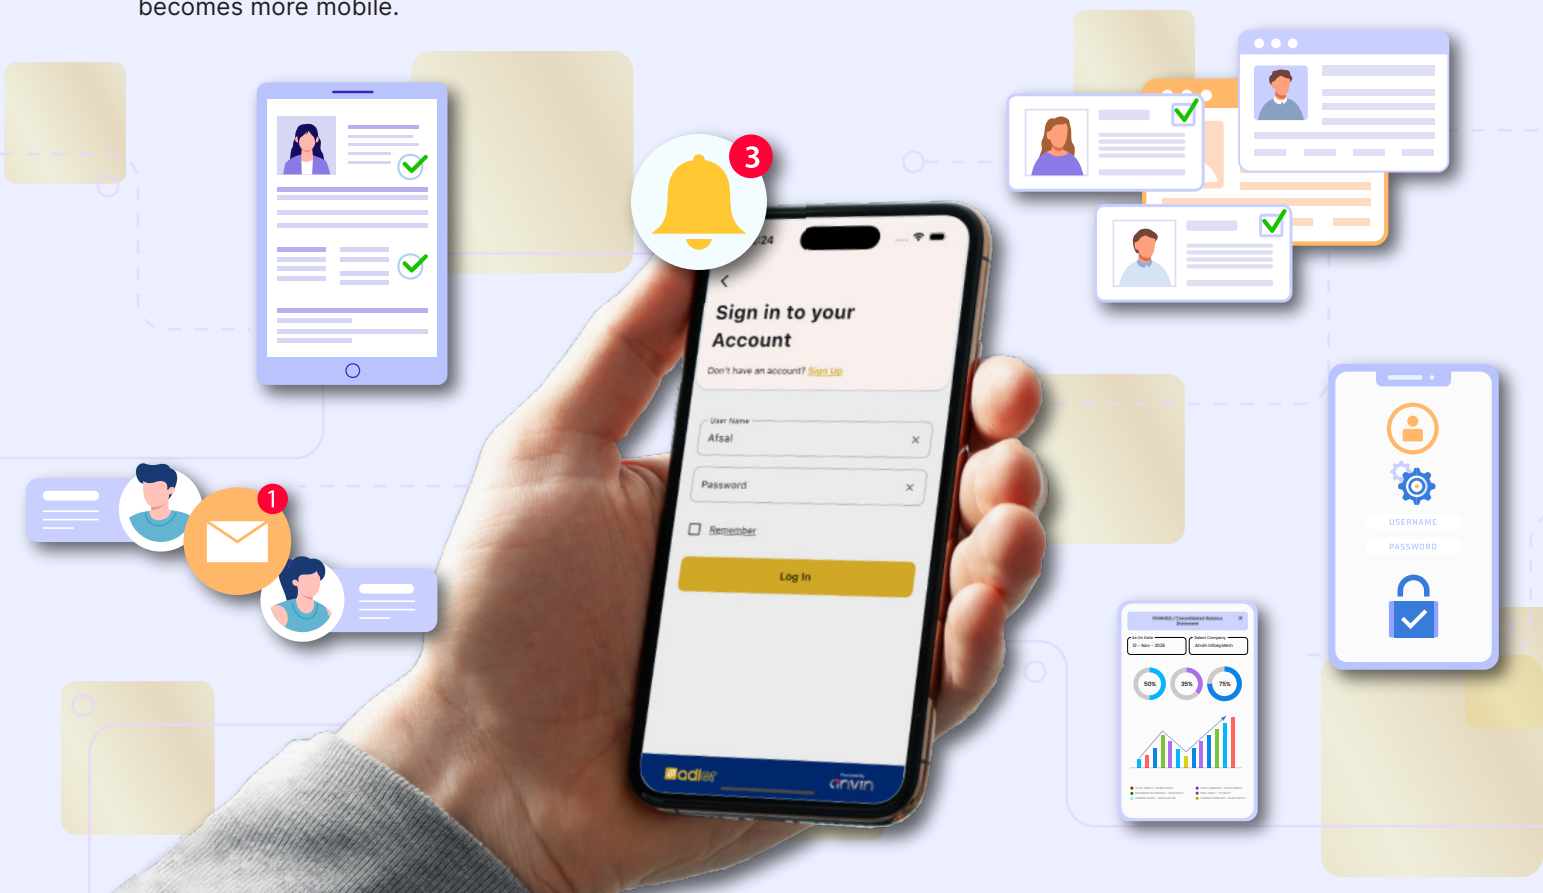

Introducing AdIER Fusion, a management mobile app designed to extend enterprise operations beyond the desktop. It enables employees and decision-makers to stay connected to organizational processes, approvals, and insights through a secure and intuitive mobile interface.

Fusion brings together core ERP functionalities across HR and employee self-services, finance and compliance, core operational requests and approvals, and BI dashboards into a unified mobile experience, complete with alerts. Built as an extension of the AdIER ERP ecosystem, the app reflects the organization's structure, permissions, and approval hierarchies with accuracy and consistency.

Through Fusion, employees can initiate requests, track statuses, and access personal records with clarity, without dependency on full system access. Managers gain immediate visibility into approvals, notifications, and key performance indicators, allowing them to act without waiting for reports or desktop availability. Its alert system is built to highlight time-sensitive events such as compliance deadlines, budget thresholds, and pending reviews, ensuring attention is directed where it matters most.

What distinguishes AdIER Fusion is its ability to deliver strategic insight in motion. Real-time dashboards and business intelligence reports present critical information in a concise, mobile-ready format, supporting informed decisions wherever work takes place.

AdIER Fusion ensures that access, accountability, and insight remain consistent, even as the workplace becomes more mobile.

Core Features of AdLER Fusion App

Alerts & Notifications

Fusion's notification system alerts employees to time-sensitive events requiring immediate attention, including contract and document expiries, approval updates, reorder levels, material expiries, budget overshooting, and more. It enables role-based assignment of alerts according to defined roles and responsibilities.

Employee Profile

The app provides instant access to centralized employee records, presenting a consolidated overview of personal and role-based information for each employee. Managers can review team details, while employees securely access and reference their own profiles whenever needed.

Structured Approval Flow

Submitted requests can be reviewed and processed through the 'Approvals' section in the Fusion app. Based on defined organizational hierarchies and configured workflows, each request is automatically routed to the designated approver with full contextual visibility. Approvers can approve, reject, hold, or refer back requests as necessary.

Operational Requests

Employees can initiate, submit, and track operational requests across leave, reimbursements, rejoin requests, loans, document requests, travel, training, payments, and timesheets. Once submitted, each request moves through a defined workflow to the designated approver for approval.

BI Analytics & Dashboard Access

AdLER Fusion brings key dashboards from all functional modules directly to your fingertips. Presented in a concise, actionable, and mobile-optimized format, complete with alerts and notifications, they deliver performance indicators, financial insights, operational metrics, and other business intelligence reports powered by real-time enterprise data.

Access Control Overview

Users are assigned defined approval authorities and system permissions based on their roles within the organisation. Available within the 'General Info' section, it offers a clear and immediate overview of allocated privileges, enabling users to understand their scope of access within the system.

Powered by **adler**

AdIER is a robust Enterprise Resource Planning (ERP) framework designed to support businesses of all sizes, from single entities to multi-location enterprises. With comprehensive functionalities, an intuitive interface, and rapid implementation, it offers a cost-effective solution for complete business management. With both cloud-based and on-premise deployment options, AdIER easily adapts to diverse organizational needs—whether you're running a single-location company or managing a multi-location network. Its rich feature set, seamless integration, and low ownership cost make it a smart choice for businesses looking to take full control of their operations.

AdIER Standard

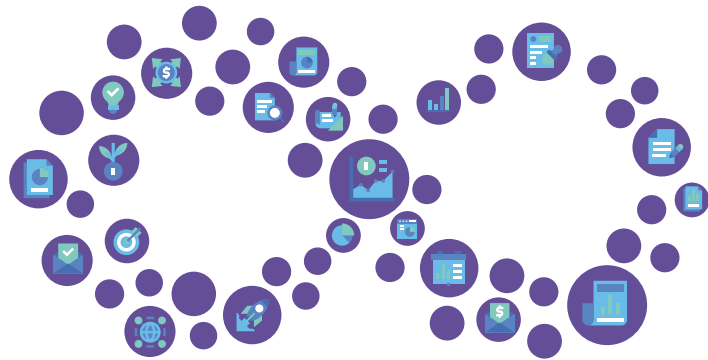

This solution is tailored for small to medium-sized organizations with defined processes and departmental workflows, and supports integrated operations across teams, enabling smoother collaboration and greater efficiency.

AdIER Enterprise

A powerful, feature-rich solution built for large and complex enterprises. With extended modules and over a thousand built-in reports, it delivers in-depth control, customization, and insights across every aspect of business operations.
